LAURION

Mineral Exploration Inc.

TSX.V:LME

OTCPINK:LMEFF

Market Capitalization: **\$14.79 million**
(based on 52-week share price range)

52-wk Low **\$0.06**
52-wk High **\$0.11**

Issued and Outstanding : **141.4 million**

Total Warrants: **19.85 million**

Total Options: **9.29 million**

Fully Diluted: **170.6 million**

Corporate Debt: **None**

Share Distribution:

- **LAURION President /CEO
Cynthia Le Sueur-Aquin,
Family and Insiders** **59.4%**
- **Institutional Investors** **7.1%**
- **Retail investors** **33.5%**

LAURION's emphasis is on the development of its mid-stage flagship project, wholly owned 44.2km² **Ishkoday Gold Polymetallic Project**, located 220km North-East of Thunder Bay, Ontario Canada.

\$7.4 million invested to-date in advancing and defining LAURION's Ishkoday's Gold Polymetallic resource targets:

Project-wide database of 14,922 surface samples, 283 diamond drill holes totaling 40,729 m, surface sampling, geological mapping, assays, geochemical analysis, and ground geophysics.

Opportunity exist for 10+M GEOs by leveraging LAURION's Ishkoday Gold Polymetallic property potential:

- **LAURION** is focussed on validating the existence of near surface bulk mineralization in Gold-Silver and Gold-Zinc rich polymetallic resource component which extends over a 3 km x 1 km area, which will validate the feasibility for an open-pit model.
- BOTE potential exist - "A"-Zone @ 40-50 million tonnes grading – 2.5 g/t Au, 0.5% Cu, 3% Zn and 30 g/t Ag (US\$ 252.47/tonne) or to 9M GEOs.
- Potential for 10+M GEOs potential (3km²) – via stacked veins, in Gold-rich and/or Gold polymetallic-rich sulphides.
- Quartz Veins up to 1km lengths grading in a range from 2.50g/t Au to 105.99g/t
- Extensive **Ishkoday** property field work to-date has identified and confirmed untapped surface targets.

laurion.ca

LAURION with its – **ONE PROJECT – ONE FOCUS – SIGNIFICANT INVESTMENT RETURN** directive - is strategically positioned and aligned with the current sector and market cycle timing, for the next Gold Super Cycle.

If past financial success . . . is any indication of future success, **LAURION's Ishkoday Gold Polymetallic Project is very promising.** Strategic divestiture timing at the height of the previous cycle re **LAURION's** non-core mining asset generated working capital furthering the exploration process required on **LAURION's** Ishkoday Project, moving it into the current development stage.

Previous LAURION divestitures generated substantive Returns-On-Investment:

- 2010 – Davidson Tisdale: \$4.0 million
- 2012 – Bell Mountain: \$2.35 million
- 2014 – Midlothian: \$75k plus 2.5%NSR (Gold) 1.5%NSR (Base Metals) which translates into a PV of \$1.5million for LAURION

Leveraging on the legacy of the high-grade past-producer Quebec Sturgeon River Gold Mine, **LAURION** has created several prospective monetizing opportunities for its stakeholders with its current Ishkoday property.

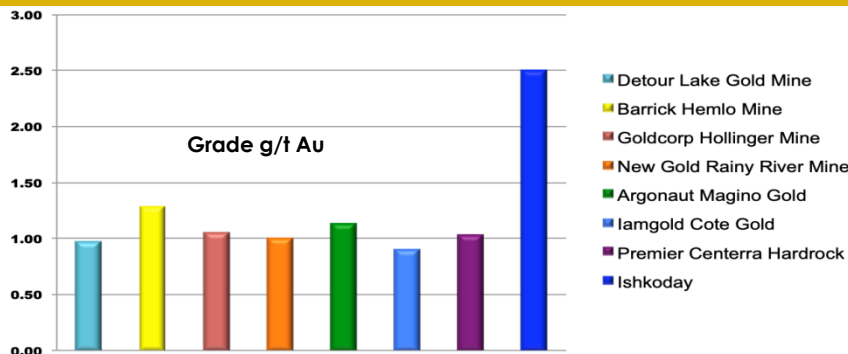

The Quebec Sturgeon River Gold Mine assets acquired back in 2007 comprised of:

- Shaft developed to a depth of 2108ft. (643m)
- 13 drifts to a depth of 1750ft. (533m)
- Between 1936 - 1942 no.3 vein produced 73,322ozs gold (0.55 ozs/ton – 17g/t Au) 15,929 ozs silver (0.12 ozs/ton – 4.11g/t Ag)
- With est. 80,000 ozs gold insitu currently remaining accessible
- Historic surface ore-bearing stockpiles (as per NI 43-101) - 10,327ozs gold is set to become a revenue generator
- Historic field work (1983-1987) highlighted 120+ quartz veins, up to 1km lengths ranging from 3.64 to 129.92 g/t Au (with confirmed significant gold assay results and VG showings)
- All historical work has been verified and have been supplemented with environmental and permitting underway

LAURION'S Ishkoday Gold Polymetallic Project Key Advantages -makes it most prospective forward moving:

- 100% Owned 'Brownfield' mining leases and mining claims,
- 4,422ha landmass comprising of contiguous mining leases and mining claims,
- Logistically accommodative - year-round exploration accessibility at reasonable cost due to power, road, water access,
- Strong relationships with local communities and Aboriginal groups,
- Northern Ontario Canada being geopolitically favorable environment,
- Favorable mineable geology (known producing Archean Greenstone Camps)
- Year-round exploration accessibility at reasonable cost,
- Logistically accommodative - proximal to infrastructure support and skilled labour force,
- Surface mineable versus Underground,
- Small Footprint (impact on surface area and environment),
- Extractive metallurgical process - (easy liberation using Gravity and Flotation processes).

LAURION's Ishkoday Project grade comparison proves superior to other Open-pit operations in Ontario

ISHKODAY BOTE potential - "A"-Zone @ 40-50 million tonnes - grading - **2.5 g/t Au**, 0.5% Cu, 3% Zn and 30 g/t Ag (US\$ 252.47/tonne) or to 9M GEOs
